TADA MEDICAL

Connecting solutions to unmet
healthcare needs

Who we are

TADA Medical is a Swedish R&D medical device company, with the inspirations to truly improve healthcare. Our vision is to deliver quality need-based healthcare solutions.

The need for safer tubes

Intravenous (IV) therapy, the mostly frequent invasive procedure, is not safe.

- **80%** in-hospital patients receive IV therapy
- Over **10% (263 million)** yearly) of IV tubes are dislodged, threatening patient safety
- Over **20 million** nurses suffer from increased workload and exposure to toxic medication from dislodged tubes
- **95%+** healthcare personnel consider IV dislodgement a safety risk to patients
- The annual global burden is **€12 billion**
- **12,800 tons** plastic waste is generated yearly

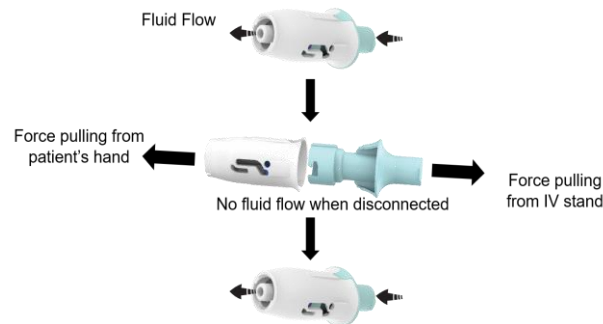

Our solution

Our award-winning, patented solution is the safety connector ReLink™. When accidents happen, ReLink™ ensures no consequence.

“We are reshaping the landscape of IV therapy.”

ReLink™ is a weak-link solution in two parts for IV tubes. When dislodged, the connector parts separate, thus protecting the patient and medical equipment. Double valves keep blood and medicine from spilling and the parts can be reconnected for rapid re-instatement of therapy.

What's in it for you?

We offer a unique opportunity for sales distributors to add value to their existing portfolio of IV consumables by the inclusion of our innovative product. You will receive first mover advantage on a new market of safety devices. We are striving for a global standard for patient protection based on our connector, join our quest!

What's in it for us?

We are looking to partners and customers certified for sales of medical devices. You offer production, and/or distribution and sales, and thus a way for us to rapidly reach patients across the globe.

“ReLink™ adds value to your product.”
