

Did you know that two grams of plastic could save your life?

Too often, a medical tube is accidentally pulled and damaged, resulting in loss of medicine, patient injury and possibly death.

We have invented a safety connector made to keep the tube, patient and personnel safe. It disconnects when the tube is pulled, double valves keep the medicine and blood from spilling, and you can easily clean and reconnect it again to rapidly reinstate therapy.

Our connector is low-cost to mass-produce, perfect for protecting the billions of tubes currently at risk of being pulled. EU directives state to always use needlestick protection, we aim to make tube protection a global standard.

We have a highly competent team and a patented solution to a massive global problem. With your help we could reach this market within two years.

**TADA MEDICAL**

## THE PROBLEM

Everyday, medial tubes are accidentally pulled out during use. Scientific publications and interviews with doctors and nurses verify the huge scale of the problem and its consequences, some being

- patients and medical staff exposure to leaking medicine and blood
- damaged blood vessels with risk for infection
- interrupted therapies
- damaged medical equipment, such as pumps
- unnecessary medical staff workload
- loss of expensive medications

Today, these accidents lead to unnecessary healthcare costs of billions of euros worldwide.

## OUR SOLUTION

Our solution, ReLink™, is a two-part, weak-link solution to be placed on the medical tube close to the patient. When the tube is pulled, the two parts separate before the needle is pulled out. Double valves keep blood and medicine from spilling and the parts can be cleaned and re-connected to rapidly reinstate therapy.

## IPR AND SALES DETAILS

ReLink™ is patent protected in several countries. It is currently being evaluated as a part of the CE process and is thus not offered for sale. We are however looking for sales distributors to aid us in bringing our product to the market.

## CONTACT INFORMATION

## BENEFITS

ReLink™ will provide the healthcare system with multiple benefits, such as

- avoiding patients and personnel exposure to toxic and/or allergenic medications
- reducing medical staff workload in time spent re-establishing therapy
- minimizing the loss of medicine
- enabling quick reinstatement of therapy after accidental interruption
- ensuring known infused volume
- reducing hospital cost due to unnecessary healthcare consumption

## VALUE PROPOSITION

Allowing accidents without pain, waste or worry.
